

# Anti Bio Termite Control

**Patented Chemical-free Termite Control Technology.**

Save money, save the planet.

This patented TTM System is an effective alternative to current methods. It reduces the reliance on current expenses such as common toxic pest chemicals. You'll have a healthier home, *and* healthier bank balance.

### **Patented TTM System**

The Ant Bio Termite Technology Management (“TTM”) system is a preventative measure for termite management using a computer microchip to induce sweeping sound frequencies through activators.

### **Sweeping Sound Frequencies (SSF)**

The system is comprised of 2 main elements: a control unit and activators.

The activators are positioned at the exterior corners of the dwelling allowing the SSFs to penetrate the target areas, thus providing a termite barrier to entry and / or disturbing existing termite activities and colonization.

### **Penetrates hidden termite colonies**

The main reason for termites surviving so successfully is their ability to live within timber and underground. They avoid coming out in the open as much as possible. Often they are not discovered in a building until infestation becomes acute and the structure is compromised.

### **System Warranty**

The system has a two-year warranty. Being fully automated ,it does not require any maintenance or replacement parts.

### **Effective for up to 15 years**

It has an estimated life span of ten to fifteen years.

### **24-hour protection, 24-hour cost savings**

These applications have substantial environmental advantages. They reduce the existing use of chemicals which also lead to significant cost savings. This is while it protects your home 24 hours a day and seven days a week.

**Your property  
is your most  
valuable asset.**

We've seen many cases of property owners being surprised when a termite colony is discovered. These critters can even get into concrete. That's why Anti Bio Termite Control is so effective. It sends distress signals (and changes the algorithms) which confuse the termites, sending them away, never to return.

#### **Member of The Australian Technology Showcase since 2002.**

*Australian Technology Showcase (ATS) is an Australian networking organisation designed to develop export markets for innovative technology based products for small to medium sized businesses with annual turnover of less than \$10 million. Anti Bio Technologies was recognised by ATS as an innovative technology in 2002.*

#### **Product Compliance**

Anti Bio Systems have been tested by independent bodies and have been granted the right to display the following safety certification markings

#### **Europe**

The use of the CE mark has been granted to Anti Bio Technologies Pty Ltd to indicate that our systems comply with standards set for the circulation of our product within the EEA.

#### **Australia and New Zealand**

This compliance label indicates that the Anti Bio System complies with the applicable standard relating to minimising electromagnetic interference between electronic products which may diminish the performance of electrical products or disrupt essential communications.
